

## Stage B Demo

- Team name: Wikiwiki
- date: 04/19/2018

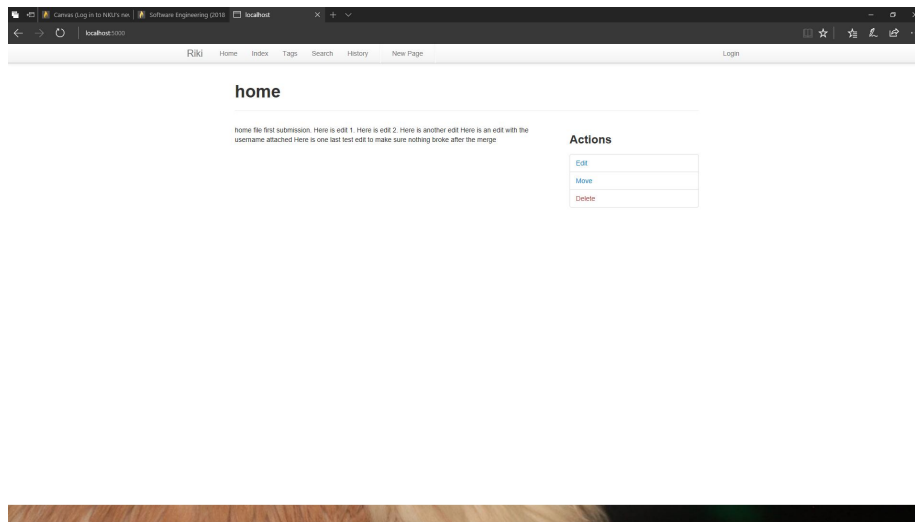

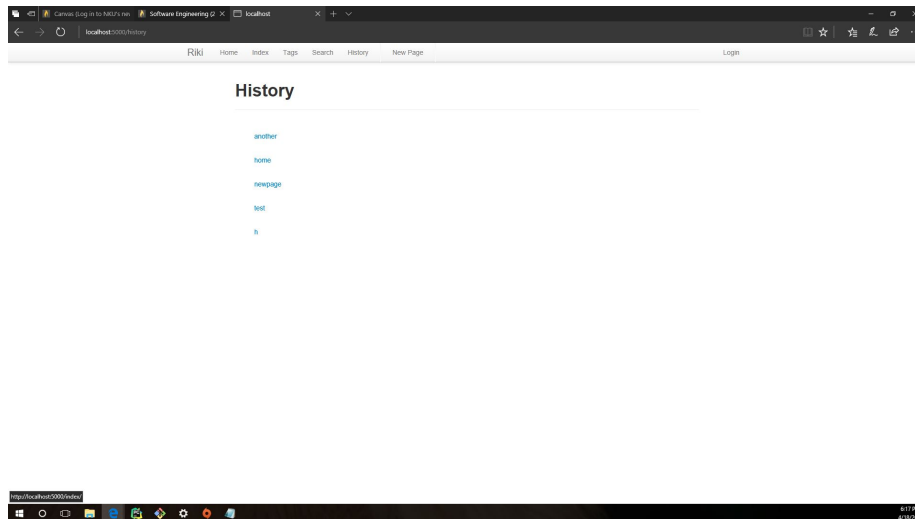

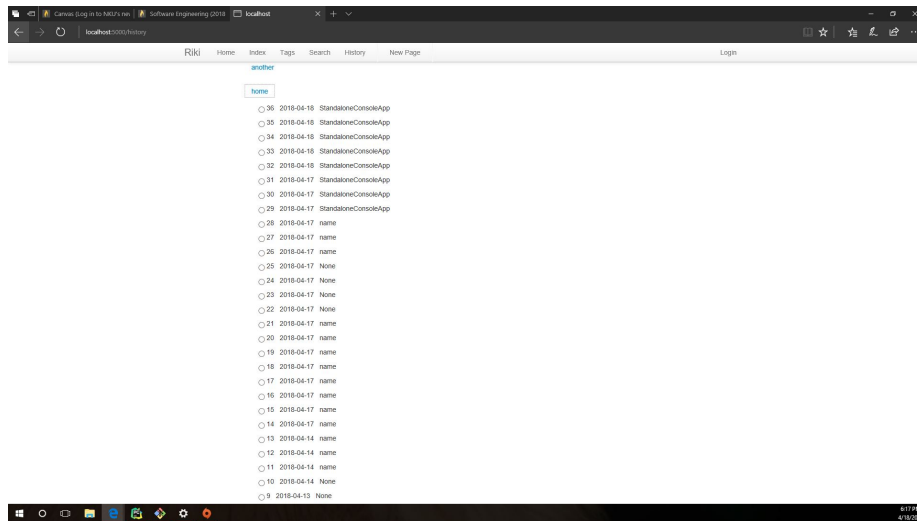

Figure 1: ArchiveSystemDemo pic 1

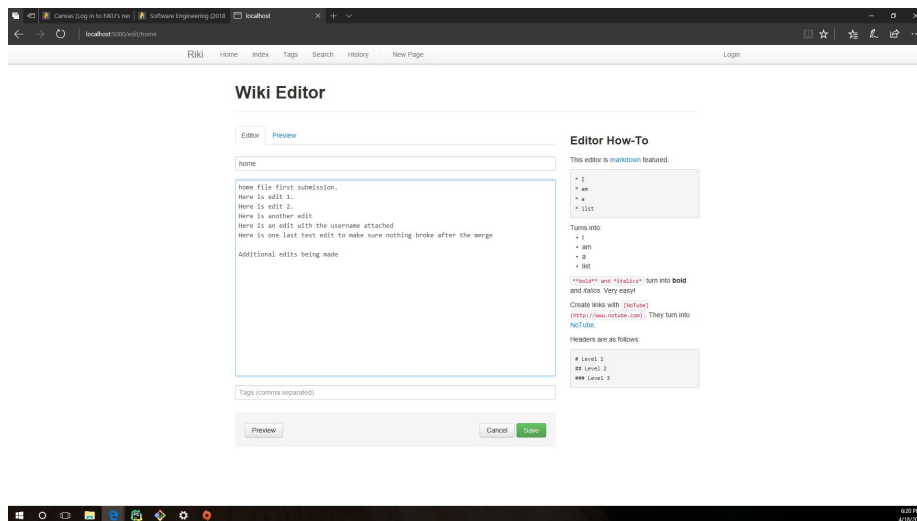

Initial state of the Home page

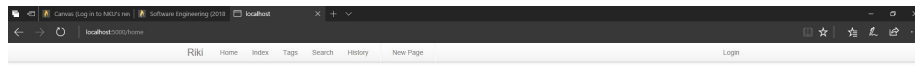

Initial view of the History page/accordion

Expanded out accordion which shows the history of all the saved versions of the page displaying the commit number, date, and username of who made the commit

Here we are editing the home page and adding the phrase “Additional edits being made to show a difference”

home

home was saved

home file first submission. Here is edit 1. Here is edit 2. Here is another edit. Here is an edit with the username attached. Here is one last test edit to make sure nothing broke after the merge. Additional edits being made

Actions

- Edit
- Move
- Delete

On save the page is stored into the database to keep record of the edit which you will see in the next pic

We now see our edit's representation in the history

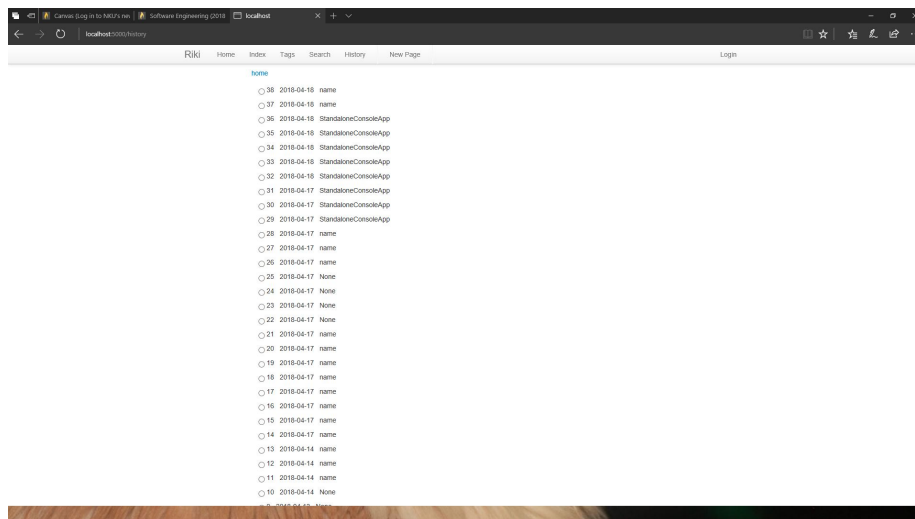

We make a move to revert to the previous version by selecting it...

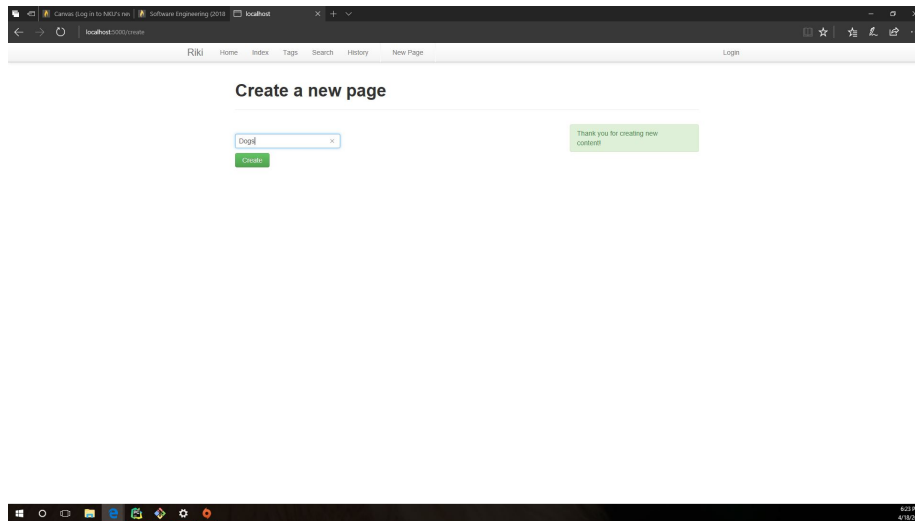

and hitting the “Go!” button.

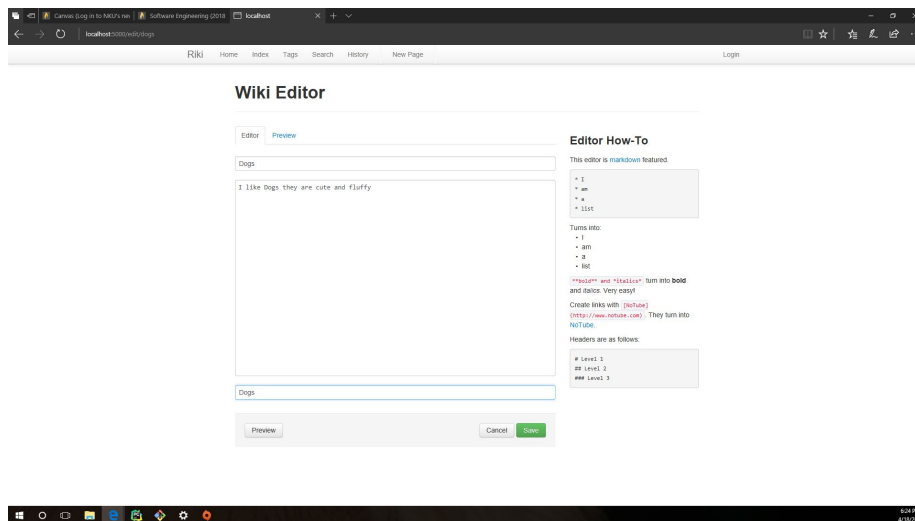

With that, the file is reverted to it's old state.

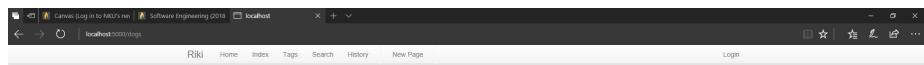

Additionally, we can see the record of our revert in the records as well

Let's make a new page to show that it too is stored.

We'll make a page about dogs, for example.

### Dogs

Dogs was saved.

I like Dogs they are cute and fluffy
